

Plasma Pen

target smaller areas

Plasma Pen is a advanced,non-invasive, skin lifting treatment used in a number of treatments to dramatically enhance looks without the need for surgery. It is used to treat, repair and lift almost any skin area, especially the face and neck. It is a highly versatile and lucrative procedure that is stunningly effective in wrinkle smoothing, eyelid tightening and eyelid hood reduction.

Designed to improve skin tone and texture; Plasma Pen successfully treats, repairs, rejuvenates and lifts ageing skin, spectacularly improves and brightens skin tone, laxity and texture, significantly tightens loose or sagging skin, dramatically reduces the appearance of lines and wrinkles and effectively reverses hyper-pigmentation, discolouration and photo-damaged skin.

Plasma Pen delivers a dramatically brighter, more contoured and more youthful appearance and the rapid results from our advanced, well-established and non-surgical Plasma Pen, blepharoplasty treatment and sublimation/fibroblasting technique and technology are absolutely stunning, virtually immediate and can last up to 3 years - all without suturing, scalpels, anaesthetic or costly and invasive surgery.

Neck and larger areas price will be given on consultation

Skinpen

micro-needling

Solo Beauty is proud to offer the only globally FDA approved micro-needling device (SkinPen Precision) which is clinically proven with visible results seen after one treatment. SkinPen Precision creates controlled micro injuries that stimulate the body's natural wound healing response which initiates the release of natural growth factors to improve collagen formation and cellular tissue. Collagen Induction Therapy assists in the rejuvenation of the epidermal integrity resulting in improved appearance of fine lines and wrinkles. SkinPen Precision can effectively remodel scar tissue whilst maintaining the overall structure of the skin. SkinPen can be used on all areas of the face and body and can treat a number of concerns.

There are three phases involved in the wound-healing process:

Phase I (Inflammation phase) – The piercing of the skin triggers a response in your immune system which disinfects the wounds, increases blood flow and initiates new tissue formation.

Phase II (Proliferation phase) – A new network of blood vessels develop in addition to wound rebuilding involving new granulation cells.

Phase III (Remodeling phase) – The wound is replaced with new blood vessels and Dermal tissues.

WHO IS SUITABLE FOR SKINPEN TREATMENT? :

SkinPen Precision can help correct:

- Fine lines and wrinkles
- Acne scarring
- Melasma
- Rosacea
- Other scarring such as trauma or surgical
- Stretch marks
- Hyperpigmentation or irregular skin tone

WHAT DOES THE SKINPEN TREATMENT INVOLVE?

PRIOR THE TREATMENT:

Topical anaesthetic will be applied for 20-30 minutes prior the treatment for additional comfort.
